(HARD SURFACES) IS LOW (5%)
WHEN COMPARED
WITH THE REGIONAL
AVERAGE OF 9%

Annual Rainfall 2013

Total rainfall in 2013 (1766 mm) was 2.5% less than the long term average (1811 mm). There are 20.1 years of rainfall record from the Waitakere at Swanson rain gauge.

The overall grade is made up of five indicators:

Water quality: Water samples are tested for temperature, oxygen concentration, turbidity and the levels of pH, ammonia and nutrients (nitrogen and phosphorus). The results of this testing are compared against guidelines for Auckland to produce a water quality index.

Flow patterns: This involves monitoring the hydrologic connectivity of the river to upstream and downstream reaches and the floodplain using the Stream Ecological Valuation (SEV), which is a method of assessing the ecological health of our rivers.

Nutrient cycling: This involves monitoring the inputs and processing of minerals, particulates and contaminants using the SEV biogeochemical functions.

Habitat quality: This involves monitoring the diversity and quality of habitats using the SEV habitat provision functions.

Biodiversity: Field assessments and samples are collected to assess the type and amount of native plants and animals using the SEV biodiversity functions.

WAITĀKERE RANGES MONITORING SITES

MONITORING BACKGROUND AND INTERPRETATION

Auckland Council's State of the Environment (SoE) monitoring programme has been building a record of Auckland's environment for more than 25 years. This information is critical to the effective management of Auckland's natural environment, after all, you can't manage what you don't monitor.

The monitoring programme shows there is a strong relationship between the health of rivers and the type of land cover in the surrounding catchment. Rivers that drain through forested catchments (particularly native forests) typically have excellent

water quality and ecology, while rivers that drain from urban catchments typically have poor water quality and ecology.

The Waitākere Ranges reporting area is predominantly forested and as a result the health of the area's rivers is considered to be excellent. Rivers in this reporting area tend to have riparian margins with lots of trees and bush, which provide shade, leaf litter and woody debris to the stream. These additions to the stream enhance the quality of flora and fauna which anchor the stream banks. The absence of urban development means there is very little channel modification or pollution from discharges or stormwater.

WAI CARE WAITĀKERE RANGES

Wai Care is a water quality education, monitoring and action programme managed by Auckland Council, for schools and community groups in the Auckland region.

The programme aims to educate people about freshwater issues and encourage and facilitate action in the local community, from water quality monitoring to streamside planting and litter clean-ups.

The following table shows achievements of the Wai Care Programme in Waitākere during the 2013/2014 financial year.

Achievement	Total Waitākere 2013/2014	Total Auckland 2013/2014
Active groups	10	138
Sites monitored	6	142
Monitoring sessions	37	246
Education sessions	29	198
Students involved in education	765	7704
Action events	0	82
People involved in action	0	2274
Native trees planted	0	16,140

Highlights

Henderson Valley School's 'Stream Team' meet every term with Wai Care to monitor their local site on the Opanuku Stream. The group of students from years 4 to 6 are experts on their site and have made videos and presentations to share with other students and the community.

For more information on Wai Care, or to view site data for your area, go to www.waicare.org.nz or call 09 3010101 and ask for Wai Care.

FIND OUT MORE

This report card is part of a series prepared by the Auckland Council's Research, Investigations and Monitoring Unit, which undertakes monitoring and research to provide information and evidence to inform the council's activities and reporting. Auckland's environment must be healthy and resilient in order

to support life and lifestyle. More report cards can be found at: aucklandcouncil.govt.nz/stateofauckland. The report card series includes reporting on freshwater, terrestrial, marine, air, soil, capacity for growth, demographics and quality of life.

GET INVOLVED

Auckland Council provides more than 20 environmental programmes across the region for you to get involved with and improve your local environment.
