

Appendix 1

Single Site Reports

Part 2 Upper Waitemata Harbour

Explanatory notes

This appendix provides a summary of the sediment chemistry and particle size distribution data for each monitoring site. The appendix has been divided according to “Marine Reporting Areas” (MRAs):

- Part 1: Central Waitemata Harbour
- Part 2: Upper Waitemata Harbour
- Part 3: East Coast Bays
- Part 4: Hibiscus Coast
- Part 5: Tamaki Estuary
- Part 6: Tamaki Strait
- Part 7: Manukau Harbour

The summaries are given as “Single Site Reports” (SSRs), in which the key physical and chemistry data are provided in 2 pages:

1. The first page provides a brief description of the site: its location; classification in terms of sediment and contaminant transport/accumulation – “Settling Zone” (SZ) or “Outer Zone” (OZ), as described in ARC Technical Publication TP 170 (ARC 2002); key physical characteristics; notable features and relevant monitoring information (e.g. location of nearby sites).
2. The second page gives a summary of the sediment contaminant and sediment texture data: results from each year of monitoring for Cu, Pb, Zn, “high molecular weight” PAH (HWPAP), total organic carbon (TOC), and “mud content” (defined below). The contaminant results have been compared with sediment quality guidelines (the ARC “Environmental Response Criteria”, ERC). Indicative trends over time (see below), and a brief interpretative summary on key features of the data, have also been given.

Plots and summary statistics include all data reported to end of 2010, unless otherwise stated (e.g. occasional clear outlier removed before plotting & analysis). Where replicate analyses have been performed, data have been summarised as medians.

Trend data given in the SSRs have been determined by linear regression. The trend plots have been fitted with a quadratic curve “line of best fit” as an aid for visually assessing the nature of changes over time in the data series. Trend indicators, using “arrow” symbols, have been used to show the magnitude and direction of trends. No statistical significance associated with these trends is given (this is discussed in detail in the body of the Status and Trends Report). The trend indicators should be interpreted as follows:

- $<\pm 1\%$ per annum change probably indicates no (or very little) trend;
- $\pm 1\text{--}2\%$ per annum indicates a small, or emerging, trend. Changes of this magnitude could be largely associated with analytical and/or sampling variation, so trends in this range may not have any “real world” significance; and
- $>\pm 2\%$ indicates a stronger trend, equivalent to $> \pm 20\%$ per decade, which is probably worth investigating further to better understand possible causes.

Mud content is given as the % of the $<500\text{ }\mu\text{m}$ fraction of the sediment that is $<63\text{ }\mu\text{m}$. Where this has been determined by more than one method in any year, the average of the values has been used.

1.1 Beachhaven

Site	Type	Description & Notes
Beachhaven	Muddy SZ	
Reporting Area Upper Waitemata Harbour	Land Use Urban	Site is located on the northern shore of Waitemata Harbour, just south of the mouth of Hellyers Creek estuary. The embayment receives runoff from mature urban catchment and influences from the wider Waitemata Harbour. The sediment here is muddy.

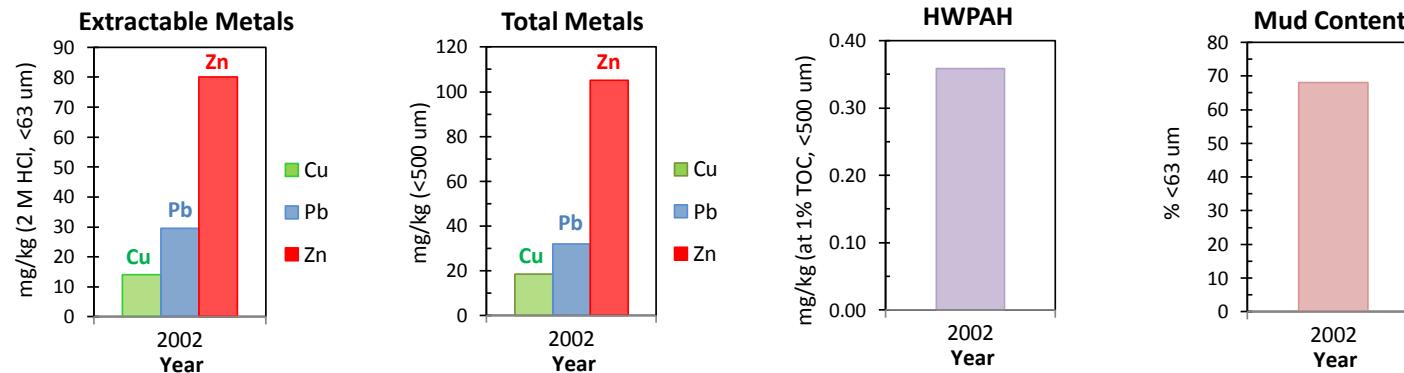

Additional Notes

Site sampled in 2002 only (KML for ARC). The "Central Waitemata East" (OHbv) site for the UWH programme (sampled annually from 2005) lies approximately 300 m north of the Beachhaven site.

Site	Description	ERC Status	Trends & Comments
Beachhaven	Muddy SZ site. Urban catchment.	Cu Pb Zn PAH	1 year of monitoring only. Not sampled since 2002. No trends can therefore be assessed. Current contaminant status ERC-Green/Amber. See the UWH "OHbv" site for data from 2005 onwards (OHbv lies approx. 300 m north of Beachhaven site).
Reporting Area Upper Waitemata Harbour

Cu >34 Pb >50 Zn >150 PAH >1.7

ERC: For Outer Zones - the greater of the <63 µm and <500 µm fractions. Settling Zones - the <500 µm fraction

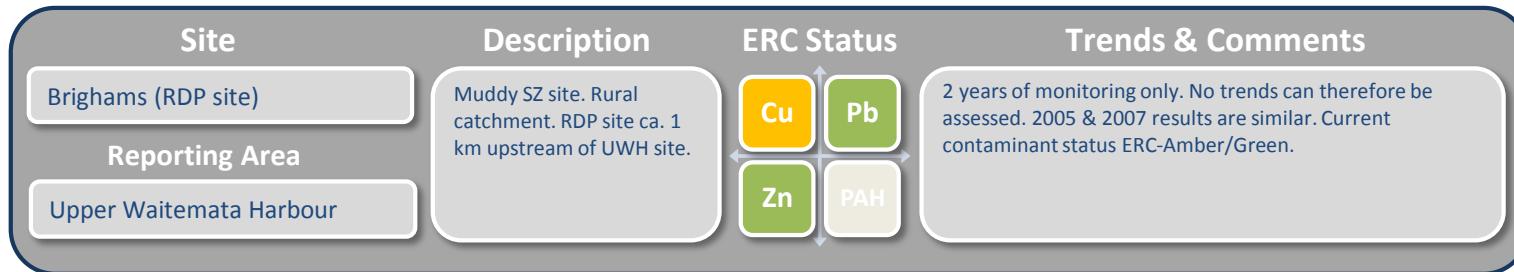

1.2 Brigham's Creek - RDP site

Site	Type	Description & Notes
Brighams (RDP site)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Rural	Site is located in the mid-to-upper reaches of Brigham's Creek estuary, approximately 1.7 km from the confluence with the Upper Waitemata Harbour. The catchment is rural. The sediment here is muddy.

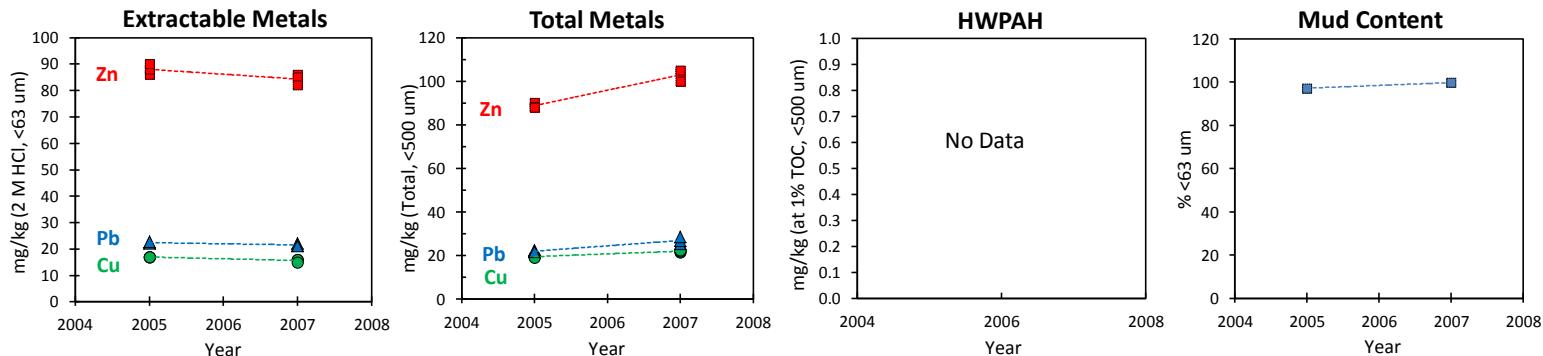

Additional Notes

The Brigham's UWH programme site, located approximately 1 km downstream of the RDP site, has replaced the Brigham's RDP site for on-going monitoring.

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

Year	Mud Content % <63 um	Organic Carbon TOC (% <500 um)	Extractable Metals (mg/kg, <63 µm)			Total Metals (mg/kg, <500 µm)			HWPah (mg/kg, <500 µm)

1.3 Brigham's Creek – UWH programme site

Site	Type	Description & Notes
Brighams UWH	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Rural	Site is located in the lower reaches of Brigham's Creek estuary, approximately 600 m from the confluence with the Upper Waitemata Harbour. The catchment is rural. The sediment here is muddy.

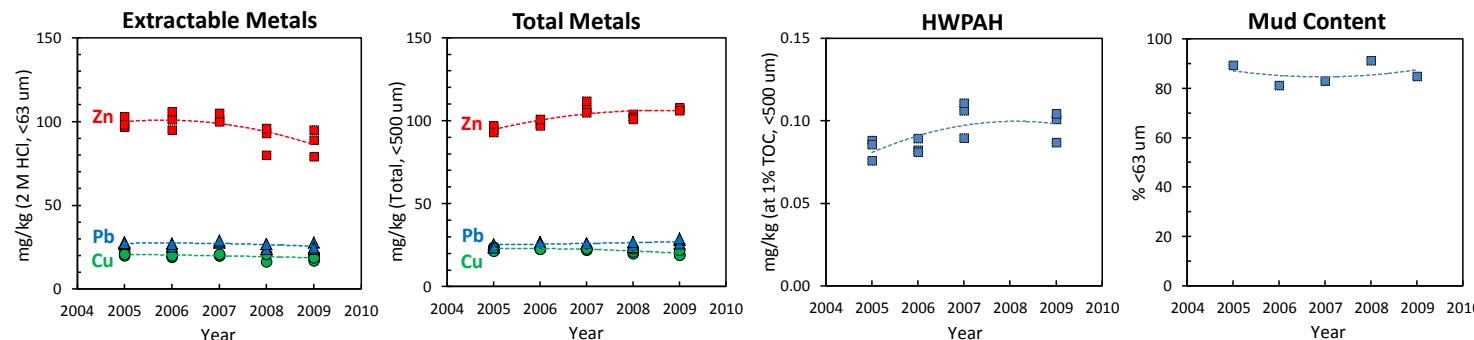

Additional Notes

RDP site approximately 1 km upstream was sampled in 2005 and 2007 (location shown above).

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.5 Central Waitemata Harbour East ("OHbv", UWH)

Site	Type	Description & Notes
Central Waitemata East (OHbv) UWH	Muddy OZ	
Reporting Area	Land Use	
Central Waitemata Harbour	Mixed urban/rural	Site is located in the upper reaches of the Middle Waitemata Harbour, on mud bank opposite the Hobsonville peninsula. The site is likely to be influenced by mixed rural/urban landuse from the broader Waitemata catchment. The sediment here is muddy.

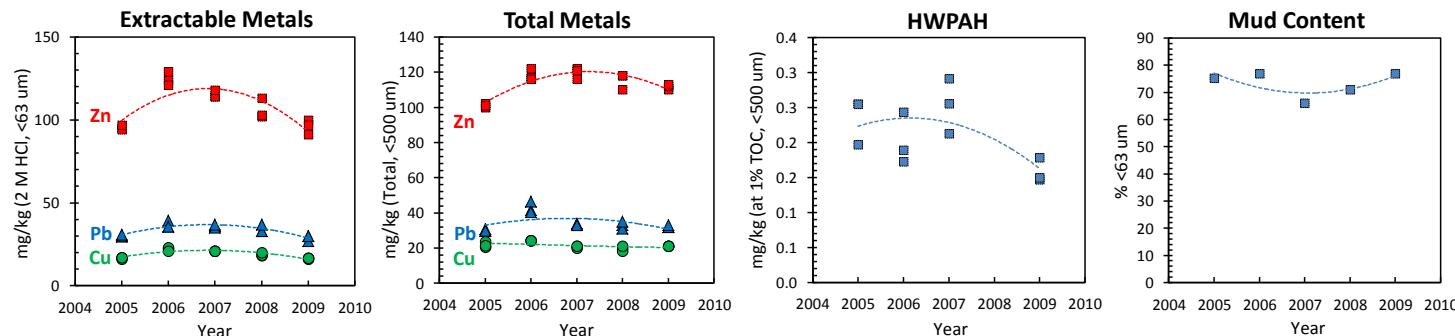

Additional Notes

The UWH programme site name is Central Waitemata East - "opposite Hobsonville" (OHbv). The adjacent urban area is Beachhaven (RDP site in the embayment to the south of OHbv - sampled once in 2002).

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.6 Central Waitemata West (Hobsonville site, "Hbv", UWH programme)

Site	Type	Description & Notes
Central Waitemata West (Hbv) UWH	Sandy OZ	
Reporting Area Central Waitemata Harbour	Land Use Mixed urban/rural	Site is located in the upper reaches of the Middle Waitemata Harbour, on sand flats adjacent to the Hobsonville peninsula. The site is influenced by mixed rural/urban landuse from the broader Waitemata catchment. The sediment here is sandy.

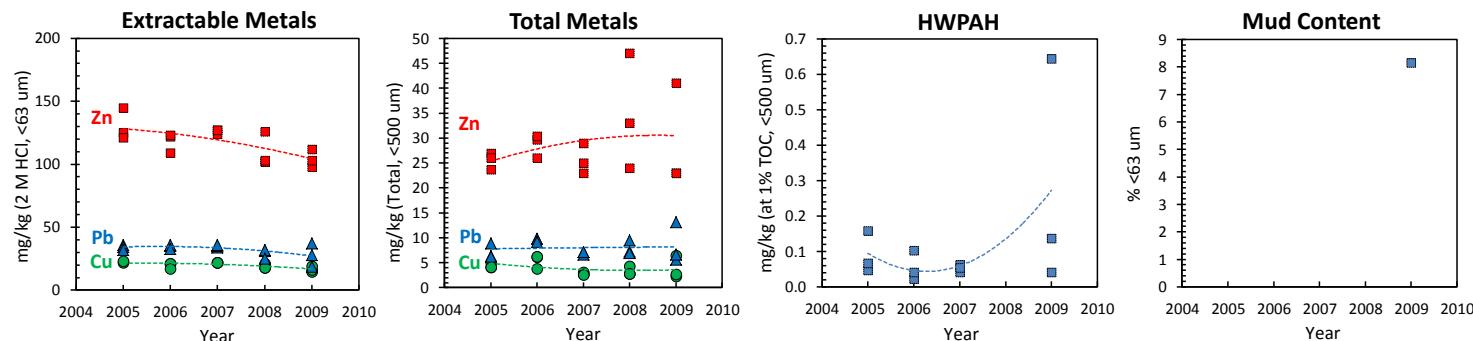

Additional Notes

The UWH programme site name is "Central Waitemata West (Hbv)". Hobsonville site has been sampled in 2002, 2005, and 2010 for the "Central Waitemata Harbour" (CWH) benthic ecology programme (sampling by ARC and AC) and annually since 2005 for the "Upper Waitemata Harbour" (UWH) ecology monitoring programme (sampling by NIWA).

Site	Description	ERC Status	Trends & Comments
Central Waitemata West (Hbv)	Sandy OZ site. Mixed rural/urban, wider Waitemata Hbr catchment influences.	Cu Pb Zn PAH	Short (4 year) monitoring period. Trends indicative only. Extreme outlier for extractable Cu (143 mg/kg in 2005) removed. One PAH rep in 2009 very high. Green contaminant levels (in mud fraction). Little overall change over time.
Reporting Area	Central Waitemata Harbour		

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.8 Hellyers Upper (RDP)

Site	Type	Description & Notes
Hellyers Upper (RDP)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Mainly urban	

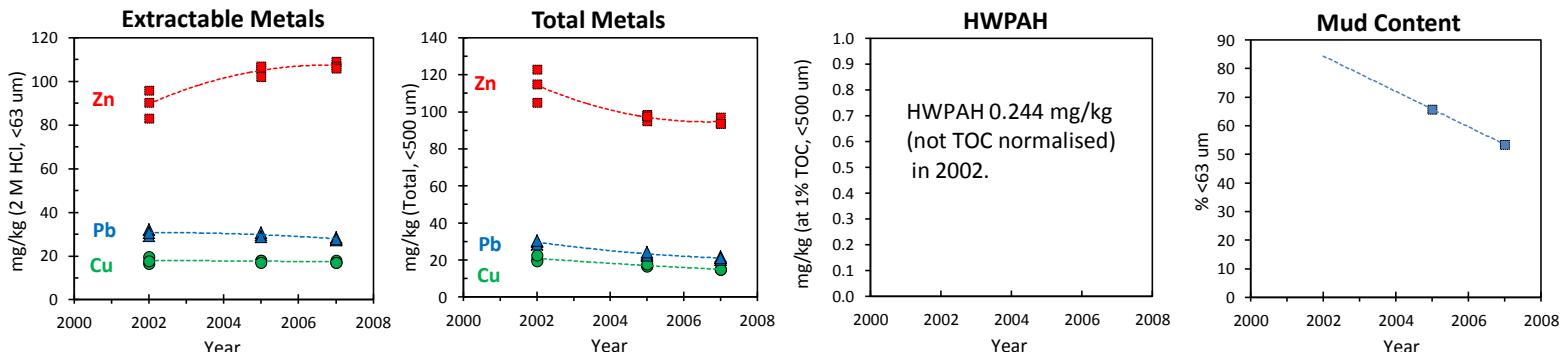

Additional Notes

There are 3 other monitoring sites nearby - Hellyers SoE programme (biannual sampling 1998 onwards), Kaipatiki RDP site (2005, 2007, & 2009), and Hellyers Upper UWH site (annual from 2005). Note that the Kaipatiki and Hellyers Upper RDP sites were also sampled in 2002, but exact site locations are uncertain.

Site	Description	ERC Status	Trends & Comments
Hellyers Upper (RDP site)	Muddy SZ site. Urban/bush catchment. Site is u/s of confluence with Kaipatiki Creek estuary.	Cu Pb Zn PAH	Only 3 samplings. Trends therefore not yet reliable. Current contaminant status ERC-Green. PAH (only) measured in 2002 (exact site location unknown) - no TOC measured, but PAH likely to be ERC-Green. Mud content only measured twice, therefore trends not reliable. 2002 metals data from

1.9 Hellyers Upper (“HellU”, UWH)

Site	Type	Description & Notes
Hellyers Upper (UWH)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Mainly urban	Site is located in the upper reaches of Hellyers estuary at the confluence with the Kaipatiki Creek arm. The site is influenced by a mainly urban catchment. The sediment here is muddy. This site has been sampled annually since 2005 for the UWH benthic ecology programme.

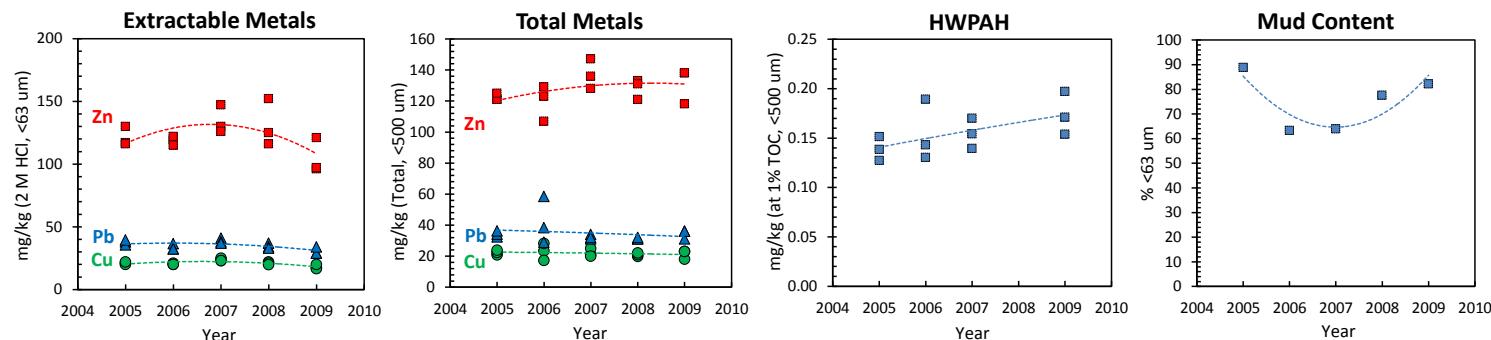

Additional Notes

There are 3 other monitoring sites nearby in the upper reaches of Hellyers Creek - Hellyers SoE programme site (biannual sampling 1998 onwards), Kaipatiki RDP site (2005, 2007, & 2009), and Hellyers Upper RDP site (2005 & 2007). Note that the Kaipatiki and Hellyers Upper RDP sites were also sampled in 2002, but exact site locations are uncertain. The Hellyers UWH programme site lies approximately 1.2 km downstream.

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.12 Herald Island (RDP)

Site	Type	Description & Notes
Herald Island (RDP site)	Sandy OZ	
Reporting Area Upper Waitemata Harbour	Land Use Mixed rural/urban.	Site is located on a large sand flat on the southern side of Herald Island in Waiarohia Inlet. Site likely to be influenced by mixed land uses - localised urban and wider rural/urban Upper Waitemata Harbour. The sediment here is sand.

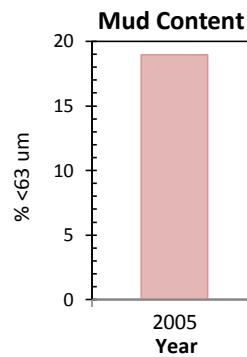

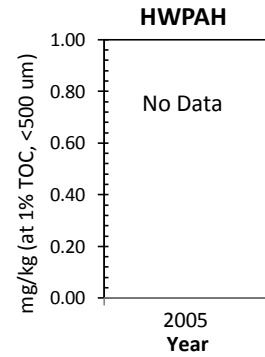

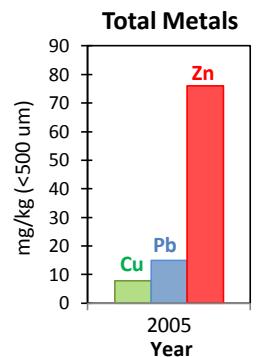

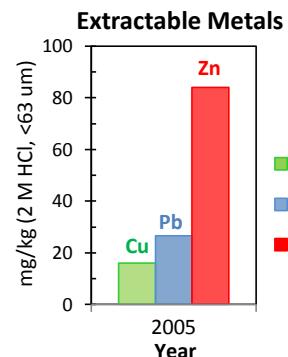

Additional Notes

Herald Island Waitemata (HIW) UWH programme site, sampled annually from 2005, is approximately 250 m south east of the Herald Island RDP site.

1.14 Hobsonville

Site	Type	Description & Notes
Hobsonville	Sandy OZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Mixed urban/rural	Site is located in the upper reaches of the Middle Waitemata Harbour, on sand flats adjacent to the Hobsonville peninsula. The site is influenced by mixed rural/urban landuse from the broader Waitemata catchment. The sediment here is sandy.

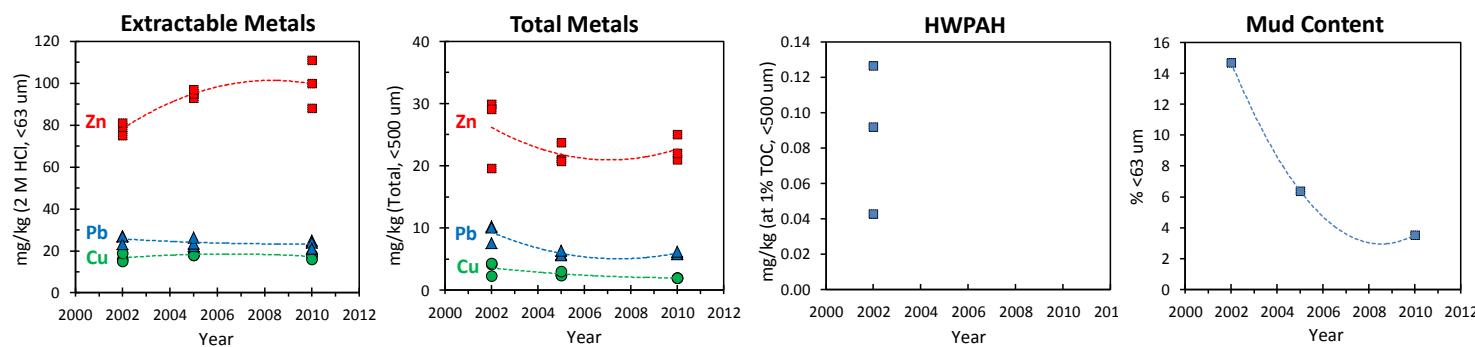

Additional Notes

Hobsonville site has been sampled in 2002, 2005, and 2010 for the "Central Waitemata Harbour" (CWH) benthic ecology programme (sampling by ARC and AC) and annually since 2005 for the "Upper Waitemata Harbour" (UWH) ecology monitoring programme (sampling by NIWA). The UWH site is called "Central Waitemata West" (Hbv).

1.14.1 Data from sampling conducted in CWH ecology programme

Site	Description	ERC Status	Trends & Comments
Hobsonville (CWH data)	Sandy OZ site. Mixed rural/urban, Upper Waitemata Hbr catchment.	Cu Pb	3 years of monitoring only. 2005 to 2009 also sampled annually in UWH programme (site "Hbv"). Current contaminant status ERC-Green.
Reporting Area		Zn PAH

1.15 Kaipatiki

Site	Type	Description & Notes
Kaipatiki (RDP)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Urban	Site is located in the lower reaches of the Kaipatiki Creek estuary immediately above the confluence with the main body of Hellyers estuary. The catchment is urban . The sediment is muddy.

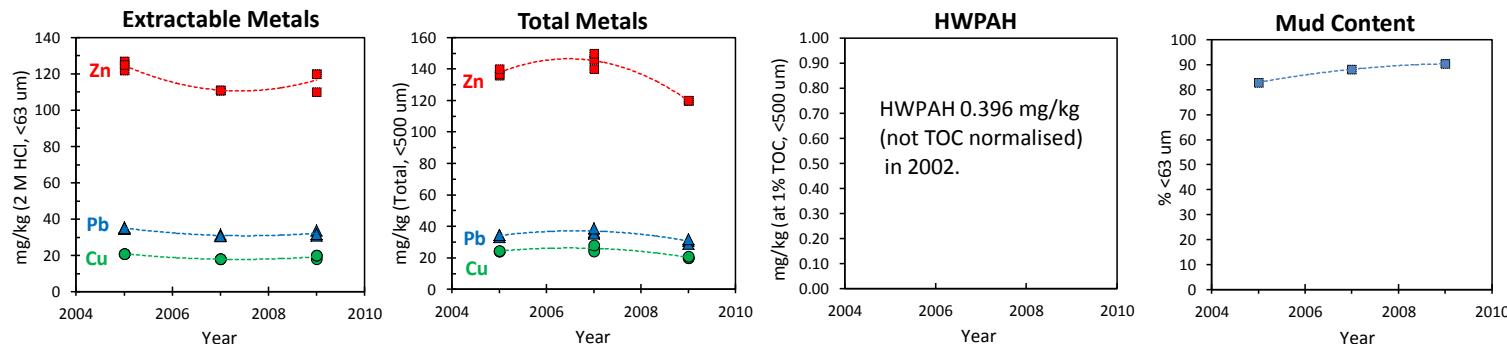

Additional Notes

There are 2 other monitoring sites nearby, that are likely to have similar influences - Hellyers SoE programme (biannual sampling 1998 onwards), and Hellyers Upper UWH site (annual from 2005). Hellyers Upper RDP site is location upstream of the Kaipatiki/Hellyers confluence. Note that the Kaipatiki and Hellyers Upper RDP sites were also sampled in 2002, but exact site locations are uncertain.

1.17 Lucas Creek, Te Wharau (RDP)

Site	Type	Description & Notes
Lucas Te Wharau (RDP)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Urban	Site is located at the confluence of Lucas Creek and Te Wharau Creek estuaries. Lucas Creek catchment is low density urban/rural on north/east side and urban on the western side. Likely to be increasing urban influence. The sediment is deep mud.

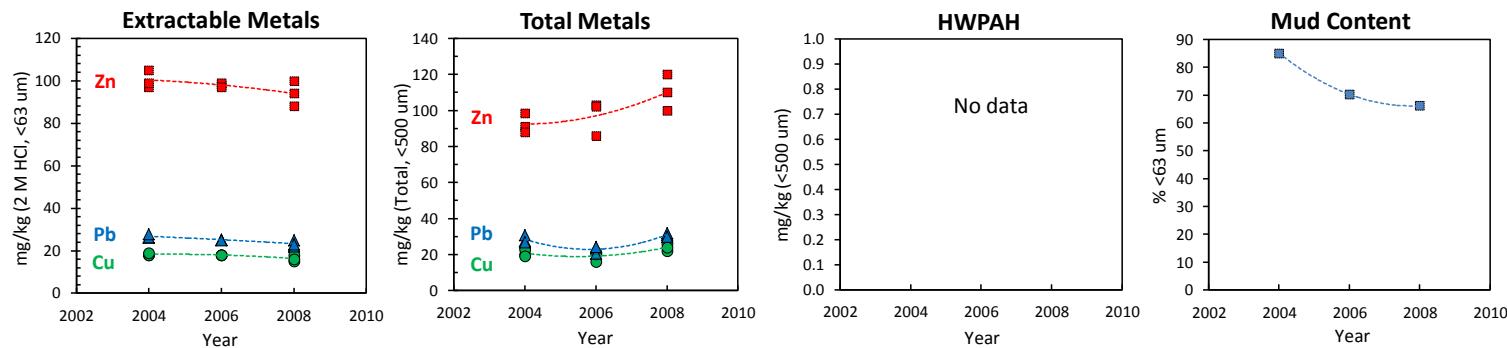

Additional Notes

Te Wharau UWH site (LUCU) is located nearby (see location aerial), sampled annually from 2005. Te Wharau also sampled in 2002 (URS for NSCC), but exact location of site uncertain.

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.20 Outer Main Channel (“MainO”, UWH)

Site	Type	Description & Notes
Outer Main Channel (MainO) UWH	Muddy OZ	Site is located in the lower basin of the Upper Waitemata Harbour. Adjacent land use is urban, but the site may also be influenced by mixed land uses of the wider harbour. The sediment texture at MainO is variable with gradient from sand to mud.
Reporting Area Upper Waitemata Harbour	Land Use Mixed urban/rural	

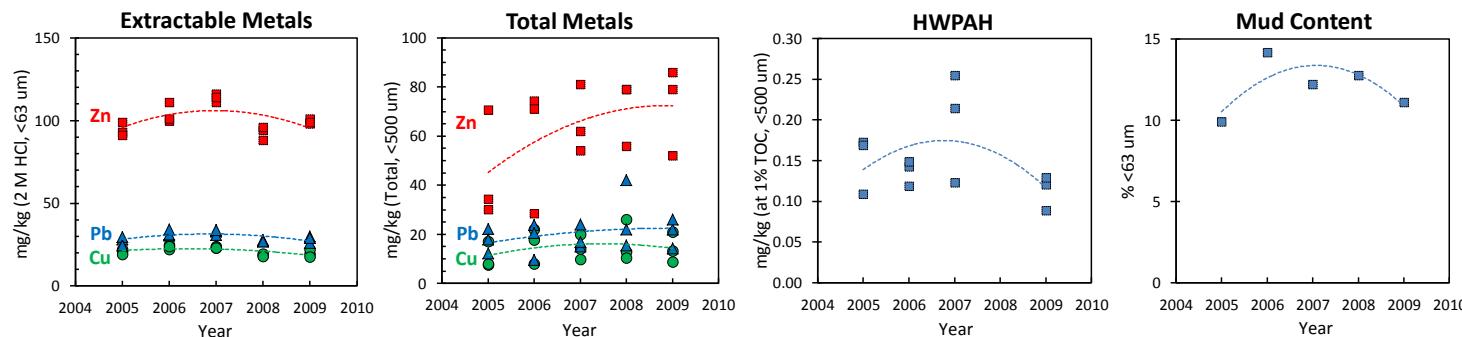

Additional Notes

Site has textural gradient - sand to mud - so that "sediment samples are collected and processed separately from the two distinctly different areas ..." (Benthic ecology 2005-2008 report: TR2008_013). This may account for variable total metals & PAH data.

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

Year	Mud Content % <63 um	Organic Matter TOC (% <500 μm)	Extractable Metals (mg/kg, <63 μm)			Total Metals (mg/kg, <500 μm)			HWPAH (mg/kg, <500 μm)

1.21 Paremoremo (SoE)

Site	Type	Description & Notes
Paremoremo (SoE site)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Mainly rural	Site is located in the mid-upper reaches of the Paremoremo estuary. The catchment is largely rural/low density urban, but also includes the prison & village. The sediment here is deep mud.

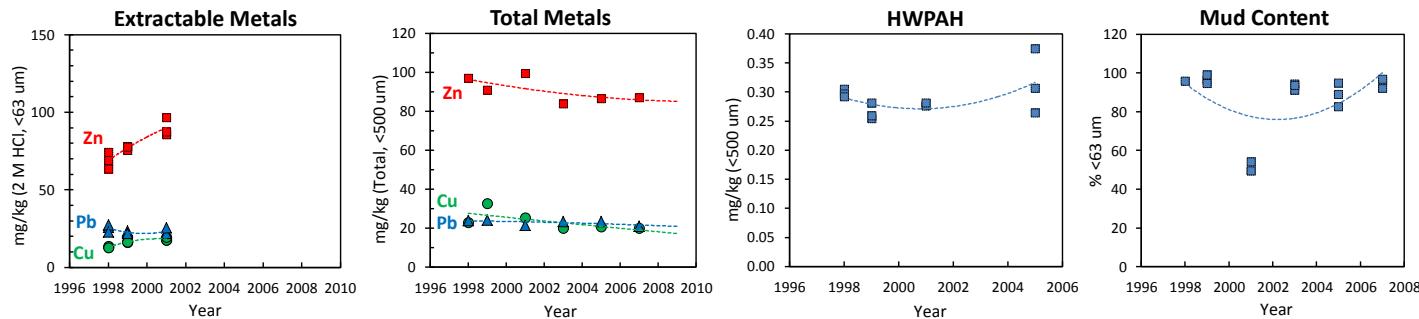

Additional Notes

The SoE Paremoremo site is approximately 200-300 m north of the UWH programme site, near the confluence of the estuary main stem and side branch. UWH site sampled annually 2005-2008. SoE site sampled biannually from 1998 to 2008. No sampling at either site in 2009. SoE site sampled again in 2011. UWH site not sampled after 2008.

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.22 Paremoremo Upper (“ParU”, UWH)

Site	Type	Description & Notes
Paremoremo (ParU) UWH	Muddy SZ	
Reporting Area Upper Waitemata Harbour	Land Use Mainly rural	Site is located in the mid-upper reaches of the Paremoremo estuary, opposite the water ski club. The catchment is largely rural/low density urban, but also includes the prison (& village). The sediment here is deep mud.

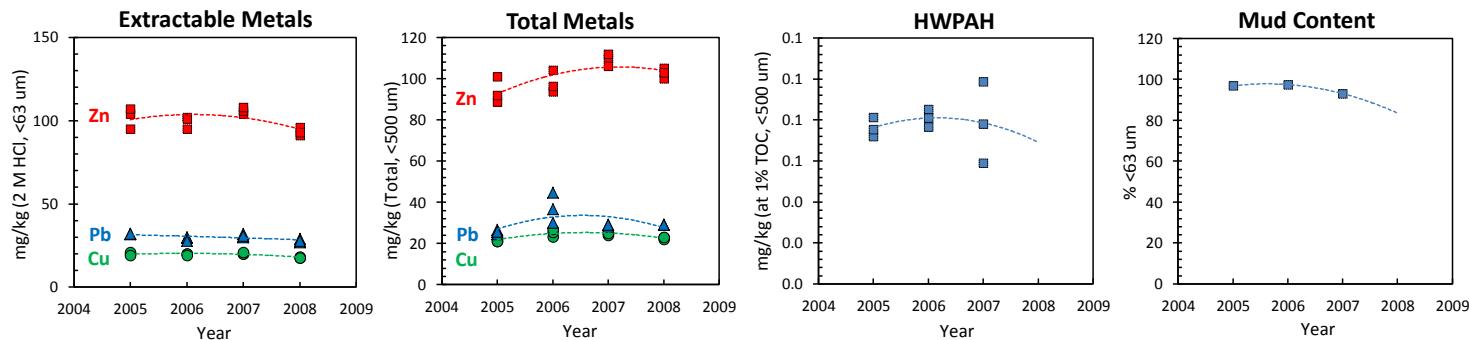

Additional Notes

The SoE Paremoremo site is approximately 200-300 m north of the UWH programme site, near the confluence of the estuary main stem and side branch. UWH site sampled annually 2005-2008. SoE site sampled biannually from 1998 to 2008. No sampling at either site in 2009. SoE site sampled again in 2011. UWH site not sampled after 2008.

Site	Description	ERC Status	Trends & Comments
Paremoremo (ParU) UWH	Muddy SZ site. Mainly rural catchment - also low density urban and prison.	Cu Pb Zn PAH	Short (3 year) monitoring period. Trends indicative only. Green/amber contaminant levels. Little overall change over time (increasing Total Zn?).
Reporting Area			
Upper Waitemata Harbour			

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.23 Rangitopuni (RDP)

Site	Type	Description & Notes
Rangitopuni (RDP)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Mainly rural	Site is located in the upper reaches of the Waitemata Hbr. The upstream catchment is largely rural but also includes low density residential and the township of Riverhead. The sediment here is mud.

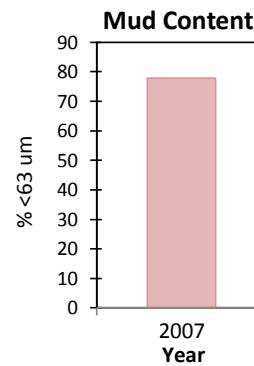

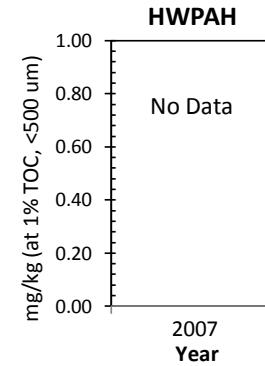

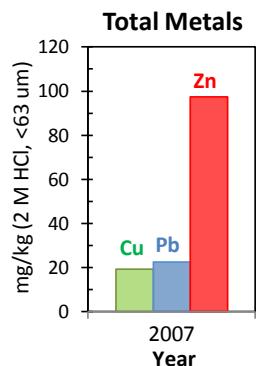

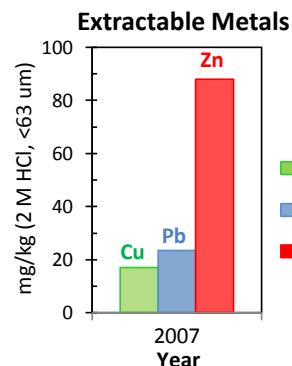

Additional Notes

Rangitopuni UWH site lies opposite the RDP site. The UWH site ("Rng") has been sampled annually since 2005. Another site, "Rangitopuni Upper" (approx. 400 m upstream, on the true right side of the channel, in the next inlet north of the RDP site) was also sampled once in 2005.

Site	Description	ERC Status	Trends & Comments
Rangitopuni (RDP site) Reporting Area Upper Waitemata Harbour	Muddy SZ site near head of Upper Waitemata Hbr. Replaced by Rangitopuni UWH site. Largely rural catchment.	Cu Pb Zn PAH	1 year of monitoring only (2007). No trends can therefore be assessed. Current contaminant status ERC-Green/Amber (Cu, just).

Sediment chemistry summary

Annual median concentrations. Colours refer to ERC (see footnotes).

1.26 Rarawaru

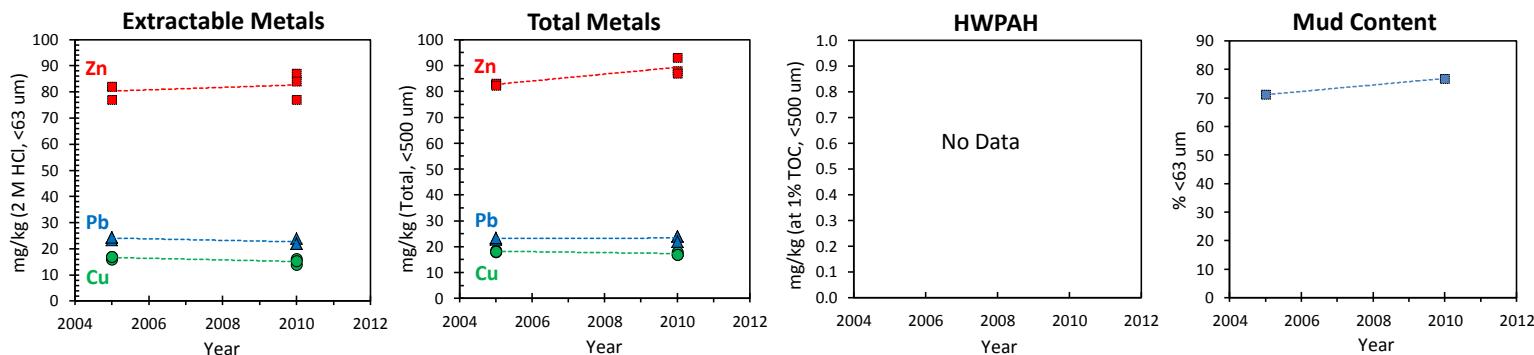

Site	Type	Description & Notes
Rarawaru	Muddy SZ	Site is located in the middle-to-upper reaches of Rarawaru sub-estuary, approximately 300 m from the confluence with the main stem of the Upper Waitemata Harbour. The sediment here is mud.
Reporting Area	Land Use	
Upper Waitemata Harbour	Rural	

Additional Notes

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

1.27 Upper Main Channel (“MainU”, UWH)

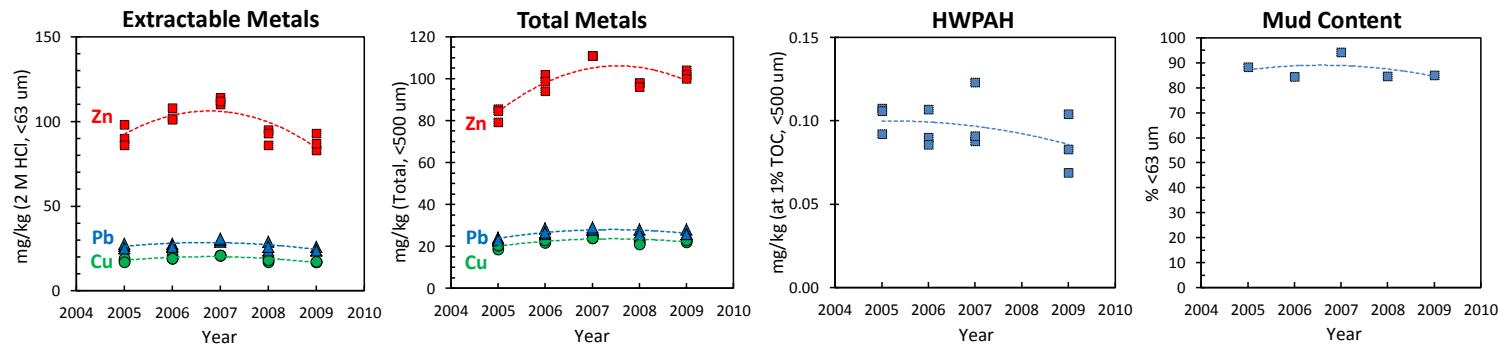

Site	Type	Description & Notes
Upper Main Channel (MainU) UWH	Muddy SZ	
Reporting Area Upper Waitemata Harbour	Land Use Rural/low density urban	Site is located in the upper basin of the Upper Waitemata Harbour, opposite the mouth of Brighams Creek. Surrounding land use is largely rural, but the site may also be influenced by mixed land uses of the wider harbour. The sediment at MainU is soft deep mud.

Additional Notes

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.

Annual median concentrations & indicative trends (by linear regression). Colours refer to ERC (see footnotes).

Year	Mud Content % <63 µm	Organic Matter TOC (% <500 µm)	Extractable Metals (mg/kg, <63 µm)			Total Metals (mg/kg, <500 µm)			HWPAH (mg/kg, <500 µm)

1.28 Upper Waitemata (RDP)

Site	Type	Description & Notes
Upper Waitemata (RDP)	Muddy SZ	
Reporting Area	Land Use	
Upper Waitemata Harbour	Mainly rural	Site is located in the upper reaches of the Waitemata Hbr. The upstream catchment and adjacent land use is largely rural but also includes low density residential and the township of Riverhead. The sediment here is mud.

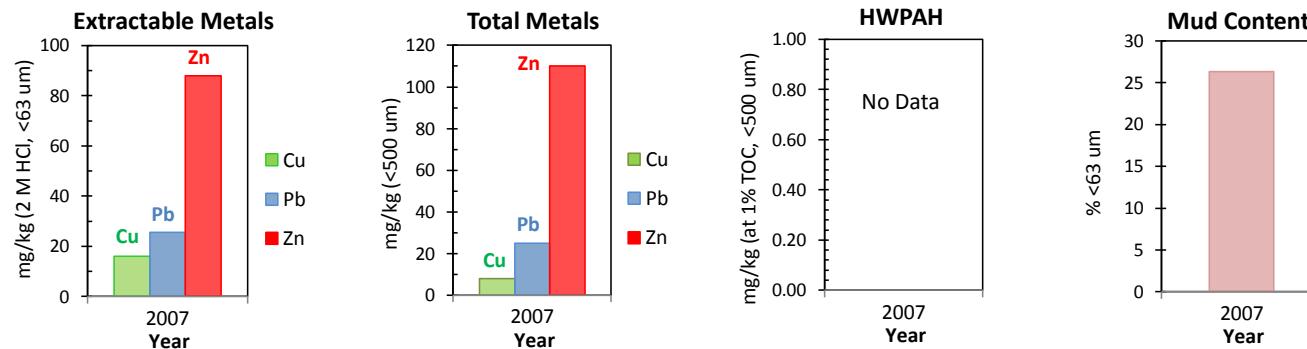

Additional Notes

Central Main Channel (MainC) UWH programme site, sampled annually from 2005, lies approximately 200 m offshore from the RDP site.

Site	Description	ERC Status	Trends & Comments
Upper Waitemata (RDP)	Muddy SZ site in main stem of UWH. Large mixed rural/urban catchment influences.	Cu Pb	1 year of monitoring only (2007). No trends can therefore be assessed. Current contaminant status ERC-Green. This site was replaced by "Central Main Channel" (MainC) site in the UWH programme, which is ca. 200 m towards LT channel from RDP site.
Reporting Area		Zn PAH	
Upper Waitemata Harbour			

Sediment chemistry summary

Annual median concentrations. Colours refer to ERC (see footnotes).

Environmental Response Criteria (ERC)

Cu <19 Pb <30 Zn <124 PAH <0.66

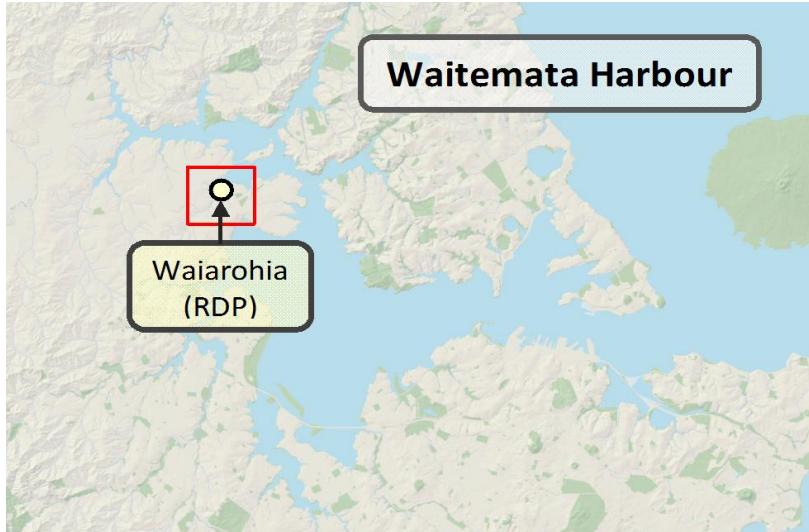

Cu 19–34 Pb 30–50 Zn 124–150 PAH 0.66–1.7

Cu >34 Pb >50 Zn >150 PAH >1.7

ERC: For Outer Zones - the greater of the <63 µm and <500 µm fractions. Settling Zones - the <500 µm fraction

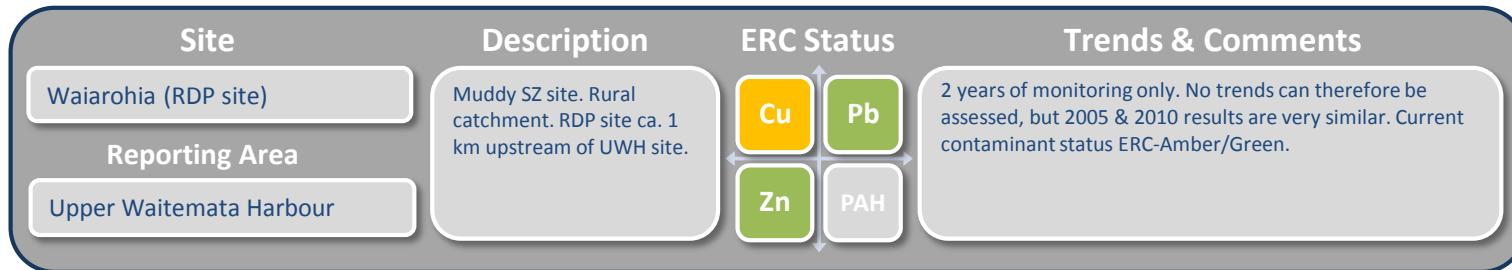

1.29 Waiarohia

Site	Type	Description & Notes
Waiarohia (RDP site)	Muddy SZ	
Reporting Area Upper Waitemata Harbour	Land Use Rural	Site is located in the middle reaches of the Waiarohia estuary. The upstream catchment is largely rural/low density residential, but major motorway development has also occurred. Whenuapai airforce base lies to the west. The sediment here is muddy.

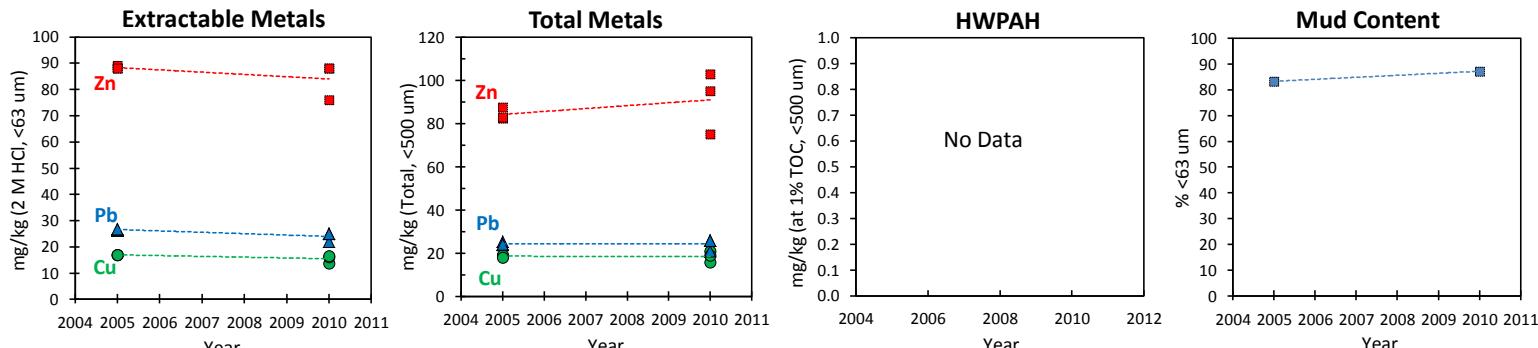

Additional Notes

The Herald Island Waiarohia (HIW) UWH programme site, and the Herald Island (RDP) site are located approximately 1.5 km downstream of the RDP site, off the southern shore of Herald Island.

Changes in sediment chemistry over monitoring period. "Line of best fit" (quadratic smoothing) shown.
